

ISYS Search Software

Search, navigation and discovery

Enterprise search technologies that are restricted to the standard “query/response” approach can no longer keep up with the rigorous information access demands of today’s businesses and government organizations.

To fully realize the timesaving and information-sharing benefits of enterprise search, winning solutions must offer a core set of out-of-the-box functionality that includes: multiple search methods to account for the different hats users wear from one day to the next; the ability to navigate a results list and drill down to more meaningful content; and the means for discovering new information and connections that weren’t previously apparent.

To that end, ISYS® Search Software has created the ISYS suite of enterprise search, navigation and discovery tools. Comprised of three products -- ISYS:desktop, ISYS:web and ISYS:sdk -- the ISYS suite addresses an organization’s total information access needs.

Why ISYS Search Software?

ISYS finds information fast. It delivers meaningful results to work with, provides seamless administration and tuning, and presents you with reports to help you optimize your search implementation. ISYS is deployed quickly and is easily maintained, allowing you to reap tangible business benefits in the shortest time possible. Since 1988, more than 15,000 organizations worldwide have turned to ISYS for search, many of them operating in government, legal, law enforcement, criminal intelligence, financial services, education, healthcare and recruitment.

Finding information instantly

- ISYS searches more than 200 file types in 60 languages. You can index, search and view the contents of any file to which you have security access, even if you don’t have the application that created a file installed on your machine.
- Build your query in simple steps using ISYS menus, ask a question in plain English or enter Boolean and proximity operators – ISYS queries are tailored to provide comprehensive and accurate searching for all users, regardless of their experience or comfort level.

Meaningful results you can work with

- ISYS provides fast results and presents meaningful information about each result and why it appears in your result list.
- Search terms are highlighted within documents, and hit-to-hit navigation enables users to jump from one instance of a search term to another to help pinpoint information quickly and avoid the need to scroll through long documents.
- ISYS goes beyond search to deliver comprehensive navigation and discovery capabilities that include on-the-fly categorization, entity detection, parametric and timeline refinement, results flagging, de-duplication, intelligent query expansion, tabbed searching and more.

Seamless administration and insightful analytics

- Through design templates, point-and-click configuration and centralized administration, ISYS reduces the overhead associated with configuring, deploying and managing search.
- ISYS SearchTrends presents reports that outline search patterns and behaviors, thus enabling an organization to better understand its users and optimize accordingly.

The ISYS Range

The ISYS product suite offers comprehensive search solutions designed to meet the diverse information access needs of organizations operating in a variety of industries.

Enterprise-class desktop search

ISYS:desktop is used to search the contents of individual PCs, LANs and WANs. It can be used as a standalone application or integrated with other ISYS products to create a complete information access system. ISYS:desktop is scalable from a single PC through to large-scale networks with thousands of users. Customers include government agencies, attorneys and litigation support specialists, intelligence analysts, recruitment professionals and more.

Out-of-the-box intranet and website search

ISYS:web provides the power of the ISYS search engine in a web-based environment such as an intranet, website or custom web application. It can act as a standalone web server, offering all the necessary support for extensibility, search log analysis and security. ISYS:web can also act as a comprehensive search tool, seamlessly integrating with other web servers.

ISYS:web is designed to meet the unique implementation needs of a variety of organizations, providing users with a multi-platform solution (Windows and Linux) that offers either out-of-the-box implementation or the flexibility required for maximum customization. This includes tools for integrating ISYS:web with your IIS or portal environment. Customers include City of San Jose, eTrade, IDG, Interfleet Technology, the Nevada Legislature, PriceWaterhouseCoopers, Promega Corporation, Thales Navigation, US Bank and many more.

Custom integration

ISYS:sdk, the Software Developer's Kit, is used to incorporate the ISYS core search component into a custom application, portal or website. It provides the ISYS search engine with DLL/shared object, COM, Java, SOAP and .NET interfaces, complete with full documentation and sample programs. Customers of ISYS:sdk include EMC Corporation, TOWER Software, Autodesk, Aderant and World Software Corporation/WORLDOX.

Modules and add-on software

ISYS:email.search offers Outlook, Outlook Express and Eudora users a fast, convenient method for searching emails in these programs.

ISYS:spider incorporates information from internal and external websites, including Lotus Domino servers, into an ISYS index.

ISYS:publisher is used to publish and distribute information to CD, floppy disk or a network, along with full ISYS search functionality.

The ISYS difference

1. Rapid deployment and piloting
2. Cost effective with a swift ROI
3. Easy to maintain and use
4. Comprehensive file format support
5. Multi-language indexing
6. Parametric and timeline refinement
7. ISYS Entities detection capabilities
8. On-The-Fly Categorization
9. ISYS SearchTrends reports
10. Seamless security integration

Is ISYS right for you?

- Do you need to find information quickly?
- Do you want a single point of access to multiple data types and sources?
- Do you want a search solution in days, not months?
- Do you need to go beyond search to include navigation, discovery and analytics?
- Do you want all of this without having to break the bank?
